

## Show me

A game for small groups or the whole class.

Each player will need two sets of digit cards numbered 2 - 9. Alternatively you may use playing cards. Note: If playing as a whole class the cards need to be large enough to be seen by the teacher some distance away.

The teacher or group leader calls out a number and the players hold up the *factors* that multiply to make the number. Use the numbers from the “*Product Pairs*” activity (p. 71) as the calling list and mark them off as you go. The students will notice that the only time they need to use two of the same numbered card is when a square number is called out.
